

VISITOR MANAGEMENT IN THE CORONA CRISIS: ENABLE CONTACT, MINIMISE RISKS

The current Corona crisis reveals the need for sustainable and reliable recording and coordination of visits. The focus here is on the health of staff and, of course, patients. For this, area balancing as well as recording of visitors is indispensable (as well as in some cases querying for COVID-19 vaccination or testing status).

Furthermore, the current situation requires a system in which processes can be quickly adapted to official requirements, even across individual locations. In addition, data protection requirements must be implemented in compliance with the law.

JAMES offers you all this as visitor management and process software. As a tool for digitising your processes, JAMES ensures a safe visitor experience that is consistent at every location and provides legal certainty and seamless processes on the operator side.

JAMES – VISITOR AND PROCESS MANAGEMENT

DIGITALISATION AS AN OPPORTUNITY

Area balancing for compliance with regulatory requirements

Rapid response to legal changes and implementation of process workflows

Process reliability for the operator and thus better controllable and uniform quality management

Process software suitable for **multisite and branch operations**

Consistent and structured visitor experience regardless of branch and location

Company-wide, consistent enforcement of new **process workflows**

Protection of the client and staff through structuring of the visiting processes

Real-time data of people on the site and also overview of all sites

Maintaining social contacts in times of crisis by monitoring the visitation processes

Data protection compliance (GDPR and DSGVO) for legally compliant data processing

Ensuring operator responsibility through digital and auditable process management

Audit-proof reporting on the number of visitors, visiting times and on check-in and check-out

Cloud-based plug-and-play processes for real-time management even across different locations

The perfect tool for digitalisation: transformation away from manual to digital processes
