
FOCUS ON SAFETY

VISITOR MANAGEMENT FOR SENSITIVE AREAS

JAMES

PROCESS MANAGEMENT REVOLUTIONIZED!

PROCESS MANAGEMENT WITH A SAFETY PERSPECTIVE

Software processes that can be quickly established, a connection to existing hardware and software, and an omnipresent focus on security - visitor and identity management has never been as comprehensive as with JAMES.

With a range of functions and processes, JAMES accompanies you on your path to digital transformation as well as in achieving the increasingly required TISAX compliance. Transparent and auditable contractor and visitor management, DSGVO-compliant data protection, and training for employees and contractors are just a few examples of company processes that you can map with JAMES.

The direct connection to your access control also enables comprehensive identity management. Multi-level approvals (e.g. for access to special areas) involving OEMs, security of information, individual NDAs and effective process planning are just a few points that help you with both digitization and certification.

Secure visitor management with pre-registration app, Outlook plugin, and digital kiosk systems for autonomous reception.

Multilingual kiosk systems for breaking down barriers for the understanding in communications

External company management such as registering employees, blocking companies, regulating access, etc.

Zoning to manage diverse zones on a site, e.g. for different safety instructions or access regulations

Identity management with multi-stage approval processes involving the client (OEM)

Connection of **biometrics and document scanners** for verification of identity

Logistics processes for managing warehouses, loading docks, waiting areas, access roads and connection to ERP systems and video analysis

Dynamically communicate, establish and effectively follow up on **new hygiene concepts**

VISITOR MANAGEMENT REVOLUTIONIZED

Fully integrated security processes for **intellectual property protection** (e.g. prototype protection), TISAX

Generation of sustainable data for e.g. **Suspicious Activity Reports (SAR)**

Data protection compliance (GDPR and DSGVO) for legally compliant data processing

Auditable, digital process control for planning, monitoring and documentation

Multilingual training and briefings at the kiosk or in the web portal to ensure operational safety and release from liability

Interfaces to various digital surveillance systems such as video surveillance and access control

Alarming and evacuation through integrated alarm server and digitally upgraded assembly points

Efficient access management for visitors and external companies through connection to access control systems

THROUGH THE PANDEMIC WITH DIGITAL PROCESSES

How can you establish digital processes that take effect in an emergency? How can the digitization of visit processes ensure that transmissions are slowed down or avoided and damage to people and companies is averted?

JAMES PANDEMIE MANAGEMENT

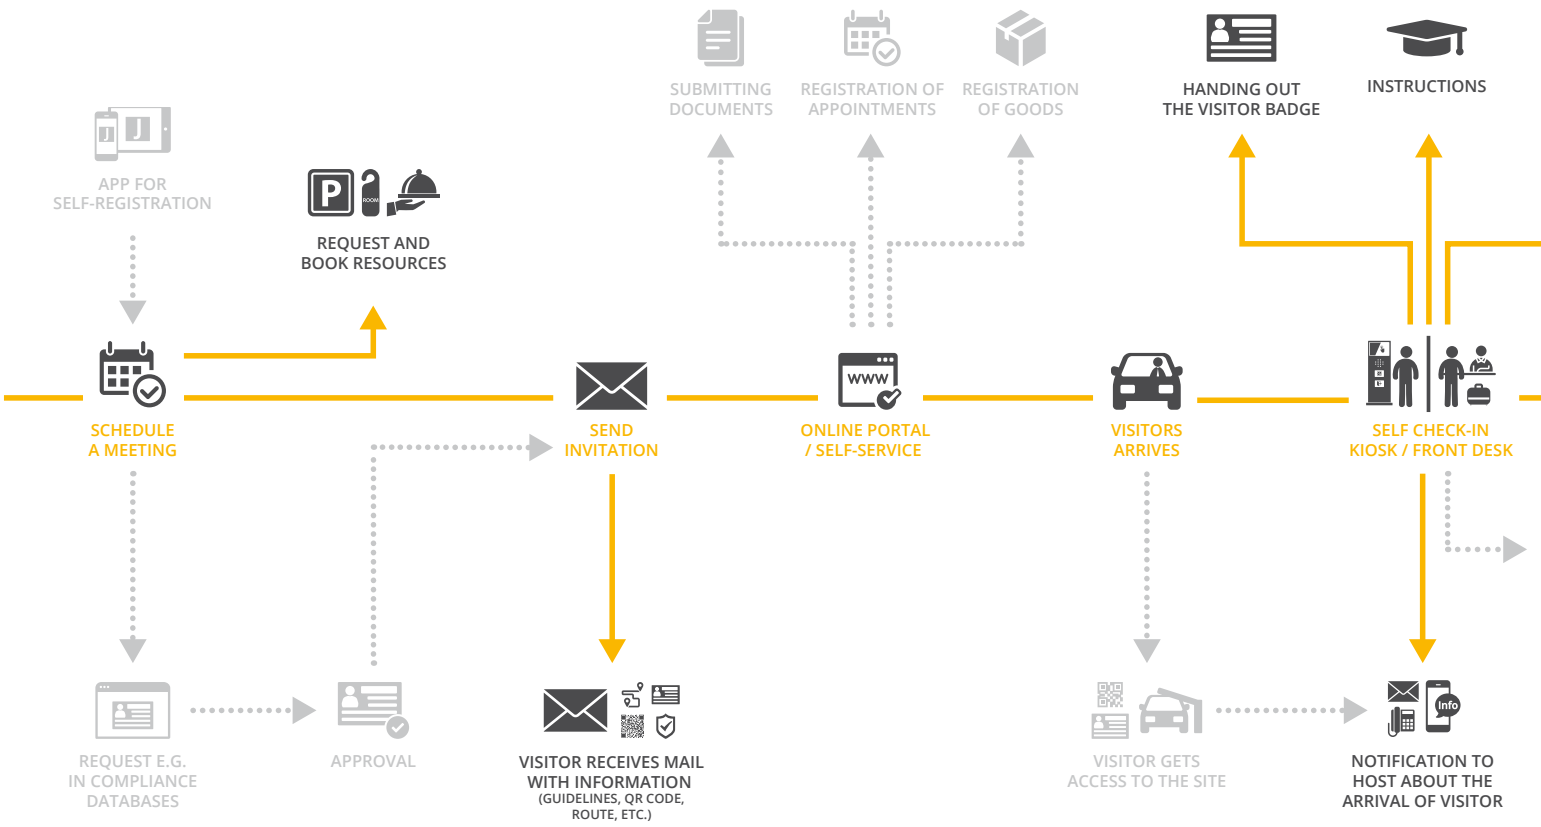
PROCESS EXAMPLE: VISITOR MANAGEMENT
A VISITOR IS INVITED TO AN APPOINTMENT

On this page you will find a timeline in which we have mapped a visitor process as an example. It shows the possibilities that JAMES can offer you in the handling of visit processes.

The entire process results from the interaction between our visitor management software JAMES as well as other software solutions such as access control, etc.

An alarm or evacuation can also be supported by JAMES if necessary. Thus, in addition to the visitor process, a complete security concept can be implemented - and that with only one software.

The requirements for TISAX certification also include contractor and logistics processes. These processes can also be mapped with JAMES.



You can find more examples for different application areas in our brochure **"Processes close to people".**

Here we show in numerous process examples learned in practice, different application areas - from logistics to the management of contractors.

To obtain this brochure, simply click on the button below on this page and download the brochure as a PDF.
